

SGS PARTNERS WITH GREENEARTH TO OFFER **ENVIRONMENTALLY NON-TOXIC DRY-CLEANING SERVICES**

A partner of SGS:

SGS

SGS, in partnership with GreenEarth Cleaning LLC, is pleased to announce the SGS Global Softlines garment dry cleaning testing service using the GreenEarth dry cleaning system.

The system uses a process that is based on cyclic-siloxane, and is the only patented dry-cleaning technology that uses this proprietary silicone solvent. An environmentally non-toxic alternative to the traditional dry cleaning solvent of perchloroethylene (also known as 'perc'). GreenEarth's silicone-based cleaning process is also better for people, clothing and home textiles. When compared to Perc dryclean solvent, it is less-toxic and irritating and safer to handle and poses no health risk to the public living near business that use it.

GreenEarth's Cleaning system has been engineered to significantly reduce the consumption of steam, water and electricity. No other dry-cleaning alternative offers a more advantageous footprint. This is an innovative, environmentally non-toxic dry-cleaning method, that is more sustainable and effective than existing systems, ensuring delicate articles can be cleaned without being harmed.

As an independent third-party laboratory with an extensive network of laboratories worldwide, Upon request, SGS will offer dry cleaning testing using the official GreenEarth solvent and the proprietary cleaning system to assess the appearance and dimensional stability of the garment.

ABOUT GREENEARTH CLEANING LLC

Formed in 1999 by three dry cleaners seeking an alternative to perchloroethylene, GreenEarth is now the world's largest environmental dry cleaning brand.

Since the issuance of its initial baseline patent in the U.S., GreenEarth now holds more than 130 patents in 40 countries along with numerous brand trademarks and copyrights. Its sustainable dry-cleaning solution is offered through more than 6,000 retail points and provides the highest degree of aftercare sustainability available in the dry-cleaning industry.

For more information about the dry-cleaning test using the GreenEarth solvent, please contact your SGS sales representative:
